Architects believe that the tall and very thin chimneys of the Rice House in Annapolis are among the finest in the country. The house was built by Thomas Jennings about 1760.

Maryland Chimneys—Soot Yourself

By Katherine Scarborough

IN 1681, the founding fathers of Maryland passed a law which provided that not more than two chimneys should be built in each dwelling. In the province of Virginia, a law of 1635 also indicated an area of regulation and control over chimneys. In the 1600s, the early colonists of Maryland were not accustomed to chimneys. The smoke from indoor cooking and heating caused problems for privacy and comfort. In the 17th century, the chimney was a social and functional necessity. The chimney was the center of the household, where the family gathered to cook and heat the home. In the early days, the chimney was often the only source of light and heat for the family. As the colonial society grew, so did the size of the houses and the need for larger chimneys to support the increasing number of rooms and occupants. The 18th century saw the development of the chimney as a symbol of status and power. The size and size of the chimney were often used to indicate the wealth and social standing of the owner. The chimney continued to evolve throughout the 19th century, with the introduction of new materials and technologies. The 20th century saw the decline of the chimney as a primary source of heat, with the widespread adoption of central heating systems. However, the chimney remains a symbol of the American home, and a reminder of the history and culture of the nation.
Deep Falls, the old Thomas homestead in St. Mary's County, has four chimneys and six brick walls of the house. These were built with a window in each panel. They almost cover the end walls of the house.

Centuries of wear and tear have made the chimneys more visible. The lines of the stones are more apparent. The stones are laid in a herringbone pattern, which is typical of colonial architecture. The stones are laid in a herringbone pattern, which is typical of colonial architecture.

The chimneys are a continuation of the roof. They are supported by the eaves, which extend beyond the walls of the house. The eaves are supported by the gable end of the roof.
